Name: _____ Pt #: _____

Child Health Associates P.C. cares about every aspect of your child's health. Please go over this questionnaire **with your child** to help us assess your child's health risk. Your answers are confidential and you may also choose to discuss your answers verbally.

American Heart Association Cardiovascular Screening Questions

- | | | |
|--|-----|----|
| 1. Has your child experienced chest pain or shortness of breath with exercise that is out of proportion to team mates or not explained by level of conditioning? | YES | NO |
| 2. Has your child experienced unexplained fainting or near-fainting? | YES | NO |
| 3. Has your child had excessive fatigue associated with exercise? | YES | NO |
| 4. Has your child ever been diagnosed with a heart murmur or high blood pressure? | YES | NO |
| 5. Is there a family history of premature death due to heart disease?
(Sudden death or disability in a relative before the age of 50, cardiac related) | YES | NO |
| 6. Are you aware of any of these specific cardiac conditions in the family: | YES | NO |

Hypertrophic cardiomyopathy
Marfan Syndrome

Long Q-T Syndrome
Heart Rhythm Abnormality

You should know that the risk of cardiac death during sports participation is rare. This questionnaire is designed to identify children who may benefit from further evaluation prior to heavy exercise or competitive sports.

Tuberculosis Screening Questions

- | | | |
|--|-----|----|
| 1. Was your child born outside the United States? | YES | NO |
| For those born abroad, was your child vaccinated with BCG? | YES | NO |
| 2. Do you, your child, or someone close to your child regularly travel outside the U.S.? | YES | NO |
| 3. Has someone close to your child ever lived in a correctional facility? | YES | NO |
| 4. Do you personally know anyone who has been diagnosed with TB or HIV infection? | YES | NO |

The good news is that Michigan is one of the "low-incidence" states for the disease of tuberculosis. The Michigan Department of Community Health no longer recommends routine skin testing of all Michigan children. But isolated outbreaks of the disease still occur and some children can still be at risk if they come in contact with the disease.
